The Original Windows 3.2 COLORS

These named colors can still be used today. The following table displays the original 16 colors that were available to Web authors using HTML tags on Windows 3.2 platforms. A Web author's choice with the 16 color limitation was to code with just the name, or by using the octothorp (#) with the hexadecimal color code, such as "#CoCoCo".

Example: COLOR="silver" OR COLOR="#COCOCO"

HTML 3.2 Colors		
Name		RGB value "# "
Aqua		00FFFF
Black		000000
Blue		0000FF
Fuchsia		FF00FF
Gray		808080
Green		008000
Lime		00FF00
Maroon		800000
Navy		000080
Olive		808000
Purple		800080
Red		FF0000
Silver		CoCoCo
White		FFFFFF
Teal		008080
Yellow		FFFF00

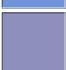

If the color does NOT appear to be correct, try viewing this page with a different browser. A Web author should always check their pages with 2 or 3 or more browsers.

SELECTED NAMED COLORS

Selected Named Colors is a reference for Web authors desiring to code the name of a color without using the alphanumeric code number for the color. When using a compounded name or a name with several parts do not use spaces between words, and use lowercase.

Example:
COLOR = "darktan"

Selected Named Colors							
Name		RGB value "# "	Name		RGB value "# "	Name	RGB value "# "
Orange Red		FF2400	Drk. Green Copper		4A766E	Brown	A62A2A
