

4.2 IONIZATION ENERGY

TABLE 4.2 Ionization Energy of the Elements

The minimum amount of energy required to remove the least strongly bound electron from a gaseous atom (or ion) is called the ionization energy and is expressed in $\text{MJ} \cdot \text{mol}^{-1}$. Remember that $96.485 \text{ kJ} = 1.000 \text{ eV} = 23.0605 \text{ kcal}$. In Table 4.2 the successive stages of ionization are indicated by the heading of each column: I denotes first spectra arising from a neutral atom; viz.,

II, second spectra from singly ionized atoms, and so on for successive stages of ionization.

| At. no. | Element | Spectrum (in $\text{MJ} \cdot \text{mol}^{-1}$) | | | | | |
|------------|---------|--|-------|--------|--------|--------|--------|
| | | I | II | III | IV | V | VI |
